**TPN
COMPOUNDER
DEVICE**

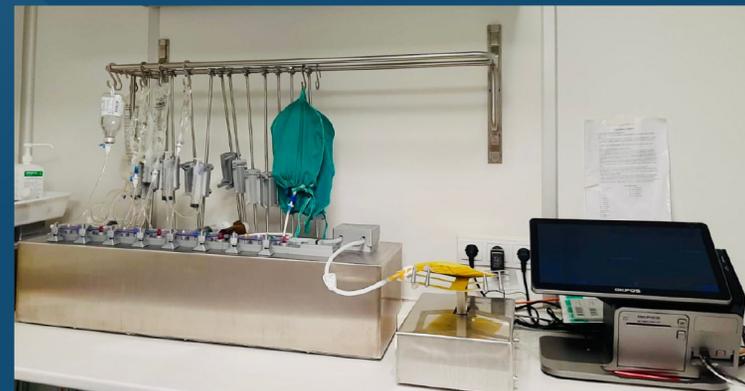

A SAFE AND INTELLIGENT NUTRITION SOLUTION FROM NEONATES TO ADULTS

- The TPN Compounder Device is designed to safely and accurately prepare parenteral nutrition solutions for patients ranging from premature infants to adults. The digitized system minimizes human error, ensuring maximum safety and efficiency.

FEATURES:

- **Digital Nutrition Order Transfer:** Direct digital transfer from the hospital information system to your device.
- **Reduced Contamination Risk:** No need for paper transfers, ensuring hygienic and safe preparation.
- **Error-Free Filling:** Automatic air intake, barcode scanning, and real-time monitoring provide perfect accuracy.
- **Advanced Monitoring:** The filling process can be monitored in real-time through the touchscreen.
- **Formulation Display with TPN Software:** Complete formulation based on the doctor's prescription.
- **Drug Tracking and Alerts:** Medication levels are monitored, with alerts in case of shortages.
- **Prevention of Incorrect Application:** No labels are given in case of incorrect filling, preventing mistakes.
- **Sterile Working Environment:** Ensures complete sterility with minimal external contact.

ADVANTAGES:

- **Time and Medication Savings:** Drug waste, stock loss, and time loss are minimized.
- **Simultaneous Analysis:** Volumetric filling with simultaneous gravimetric analysis.
- **Minimized Precipitation and Clogging Risks:** Sequential filling system and alert limits reduce error risks.
- **Critical Situation Alerts:** System alerts for critical situations such as dosage overdose or clogging.

SAFETY AND EFFICIENCY:

- The TPN Compounder Device ensures the safest preparation of each solution while providing operational ease for nurses. As a result, our device offers safe, accurate, and efficient nutrition solutions for patients.
